Acknowledgments	ix
Chapter 1 · Introduction	3
Chapter 2 · Classical-Materialist Paradigm v. Process- Informational Paradigm	13
Introduction	13
Classical-Materialist Paradigm, Process-Informational Paradigm: Perspectives Compared	14
1. Prominent Founding Theorists	14
2. Objects	17
3. Space/Fields	21
4. Time	26
5. Cause	28
6. Information	34
7. Language	39
8. Processor of Information	43
Conclusion	47
Chapter 3 · Holographic Principle, Primacy of Information, and Assemblages	49
Introduction	49
Quantum Holography and Primacy of Information	49
1. Gabor's Quantum of Information (Logons)	50
2. Laszlo and the "In-Formation" Field	53
3. Bohm: The Holo-field and Holomovement	54
4. Quantum Holography Principle: Black Holes, Information, and Boundaries	55
Phase Conjugation: Communication Channels	57
Exemplary Initial Applications of QH from the Social Sciences	64
1. Alexander Wendt: International Relations and Quantum Holography	65

2. Raymond Bradley and Group Solidarity	66
Assemblages, Strata, and Abstract Machines	72
1. Assemblages	73
2. Strata	75
3. Abstract Machines	80
Quantum Holography, Ecological Niches, and Critical Criminology	83
1. Quantum Holography and Ecological Niches	83
2. Bergson and Affordances	84
3. Deleuze, Guattari and Affordances	85
4. Ecological Niches as Bounded Spheres	86
Quantum Holography at Work	87
1. Capture and Subjectification	87
2. Panopticism and Disciplinary Mechanisms	89
3. Subcultural Theory in Criminology	90
4. Terrorist Cells, Boundaries and Phase Conjugation	93
Conclusion	95
Chapter 4 · The Question of Agency: Quantum Holography and Schema QD	97
Introduction	97
Quantum Consciousness	100
1. Roger Penrose and Stuart Hameroff: Objective Orchestrated Reduction (“OR”)	101
2. Henry Stapp: Abstract Ego and the Collapse of the Wave Function	103
Quantized QD	106
1. Components of Schema QD	107
2. Dynamics of Schema QD	111
Phase Conjugation	114
Topological Model: Cross-Cap and “Figure 8” Cuts	119
Quantum Holographic Model of Language and Speech Production	123
Political Economy, Schema QD, and “Point of Subjectification”	129
Conclusion	132
Chapter 5 · Quantum Holography at Work: Applications in Criminology and Law	135
Introduction	135
Criminology	135
1. Political Economy	136
2. Question of Agency in Cultural Criminology	138

3. Othering	139
4. Relevance of Cultural Practices	140
5. Allure of Edgework and Emotionality	150
6. Emergence of a Cyber-Informational-Cinematic/ Video-Driven Consumer Society	155
Law	156
1. Judges' Decision-Making	156
2. Judges as Speakings	162
Conclusion	166
Chapter 6 · Transformative Justice	167
Introduction	167
Toward a Permanent Revolution: Molecular Assemblages	168
1. Subjectification and Deterritorialization	169
2. Reconstructive Nomadology	178
3. Becoming Identities	182
Discursive Reconstructions: "Man of Truth" v. "Power of the False"	188
Evaluative Schemas: Distributive and Retributive Guideposts	194
Conclusion	207
Chapter 7 · Conclusion	209
References	211
Index	235

Acknowledgments

This book has been inspired by major developments in quantum and holography theory. It is a challenge to Newtonian-based ontologies. We have not met the challenge in the social sciences. I have great pleasure to acknowledge the few true pioneers in meeting this challenge: Raymond Bradley, Stephen Robbins, and Alexander Wendt. They have initiated a new era of thought and have been inspirational for writing this book. Challenging the dominant disciplines in their innovative theorizing, they, often with singular conviction, have taken the initial steps in truly engaging quantum and holography theory in the social sciences. My work here integrates, builds upon, and in many cases, reconceptualizes many of their thoughts. Thanks to David Polizzi, editor of the *Journal of Theoretical and Philosophical Criminology*, who saw the merits of my initiative. I owe many thanks to Joyce Kelly, who was always there in support and encouragement for the challenging task before me, and with whom I often shared the “aha!” moments of excitement. Beth Hall, editor at Carolina Academic Press, has been unwavering in her support, encouragement, patience, and excitement for my project. She is a truly exceptional professional editor with whom to work. Special thanks, too, for Grace Pledger, production editor at Carolina Academic Press, for her impeccably prompt, patient, and helpful responses. Any errors, however, are mine.

There was a time that Newton’s great discoveries were promising to produce a Laplacian deterministic universe, which, theoretically, could lead to discoveries of all laws of nature (Albert Einstein’s “God Does Not Play Dice”), and in particular, all causes of crime. The latter ideal has been uncritically incorporated in contemporary dominant forms of empirical and positivistic research. We need to reconsider in light of its failures and the challenging new emergent sciences. Thus, this is also an anticipatory acknowledgment of those to follow, brave and bold enough to rethink ontology and epistemology and to recognize the unique becomings, “clouds of possibilities,” that we are, and the more just society that is possible.
