# Acknowledgments

I am constantly amazed at the way cybercrime research grows each year. It is clear that cybercrime has become a critical concern to criminologists and policy makers across the globe. This is a wonderful change since the first edition of this book was published a decade ago. I am grateful to the many individuals who contributed to this work, whether making revisions to their prior work, or those authors whose chapters are appearing in this edition for the first time. Their research helps to shape the field and provides excellent insights into emergent areas of concern. These contributions compose the intellectual core of this work, and should help define and identify new areas of research in criminology and criminal justice. I must also thank the various reviewers whose feedback helped improve the quality and theoretical impact of the chapters who appear in this work. Many thanks are also due to the publishing team at Carolina Academic Press, especially Beth Hall for her assistance throughout the creation and submission of this edition. I appreciate all of their efforts to market the book and ensure its success over the past 10 years. Finally, I would like to thank my family and friends for all of their support throughout this process, most especially my wife and daughters for all of their love and assistance.
