Acknowledgments

As the field of criminological research on cybercrime continues to evolve, I am grateful to the many individuals whose contributions to this work facilitated its creation, value, and applicability. I am very grateful to those authors whose revised chapters help document the shifts in policy and practice in the field. Also, my thanks go to those authors whose chapters are appearing in this edition for the first time. Their research is helping to shape the field and provides excellent insights into underexamined issues in the field. These contributions compose the intellectual core of this work, and should help define and identify new areas of research in criminology and criminal justice. As the empirical investigation of cybercrime gains greater prominence in the social sciences, my hope is that this work will provide guidance to the discipline. I must also thank the various reviewers whose feedback helped improve the quality and theoretical impact of the chapters who appear in this work. Great thanks are also due to the publishing team at Carolina Academic Press, especially Beth Hall for her assistance throughout the creation and submission of this edition. I appreciate all of their efforts to market the book and ensure its success. Finally, I would like to thank my family and friends for all of their support throughout this process, most especially my wife Karen and daughter Scarlett for all of their love and assistance.
